FOR IMMEDIATE RELEASE: October 1st, 2006

“Red Llama Releases Version 1.0 of SimPraxis™ Interactive Simulation Software Platform”

SEATTLE, WA—Red Llama, Inc announced today that it is releasing of version 1.0 of its SimPraxis™ interactive simulation software platform.

SimPraxis is the underlying software platform for developing cognitive training modules for medical professionals. In addition to Red Llama’s patent-pending interactive video technology, SimPraxis includes the capability to interact with 3-D models to train on the correct placement of devices inside the body, medical imaging and other media types. Red Llama is currently working with Beth Israel Deaconess Medical Center (an affiliate of Harvard Medical School) to create a hysterectomy training module for surgical residents and medical students.

Red Llama, Inc. is a privately held Washington State training software company dedicated to providing the premier method for disseminating expertise on medical procedures and other complex processes. Founded in 2002, Red Llama works with its customers and other experts in numerous medical specialties to produce training modules based on its SimPraxis™ platform. SimPraxis is an interactive simulation software platform, which offers an easy, cost-saving, and engaging way to deliver training on new and existing medical procedures and devices quickly and directly to those who need it, when and where they need it. More information and a demonstration video is available at <http://redllamainc.com>.

SimPraxis™ is a trademark of Red Llama, Inc.
